

Kishor Gangarde

Software Engineer | Full Stack Developer

Pune, Maharashtra | 7499621927 | gangardekishor87@gmail.com | github.com/K871git | linkedin.com/in/kishor-gangarde

PROFESSIONAL SUMMARY

Full Stack Software Engineer experienced in building enterprise web portals and REST APIs using Laravel, PHP, and MySQL. Built 15+ REST APIs for desktop client integrations and contributed to 20+ application modules, including authentication, authorization, and CRUD systems on Service Layer and MVC architecture, reviewed by senior engineers in a security-product environment.

TECHNICAL SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, jQuery, AJAX, HTML/CSS, OOP

Backend & API: REST API Development, MVC & Service Layer Architecture, Laravel Sanctum, Authentication & Authorization

Databases: MySQL, ClickHouse, Database Design & Optimization

Version Control: SVN (professional), Git & GitHub (personal)

Learning / Personal Projects: React.js, Node.js, Python, Docker, Kubernetes, PostgreSQL, CodeIgniter

PROFESSIONAL EXPERIENCE

Software Engineer (Full Stack Developer)

June 2024 – Present

Biz Secure Labs (Net Protector Antivirus)

- Developed and maintained backend modules for enterprise security web portals using Laravel, PHP, and MySQL, contributing to 20+ application modules.
- Designed and built 15+ REST APIs consumed by MFC desktop applications, enabling secure data exchange between desktop clients and server-side systems.
- Implemented authentication and authorization using Laravel Sanctum, securing API endpoints across multiple internal portals.
- Contributed to 5+ modules within client-facing web applications, working with MySQL and ClickHouse databases under structured code reviews from senior developers.
- Built and maintained systems using Service Layer and MVC architecture patterns to keep business logic clean and maintainable.

YARA Rule Portal — Full Stack Developer

Technologies: Laravel, PHP, MySQL, REST APIs, Laravel Sanctum, jQuery, JavaScript, AJAX, MVC, Service Layer Architecture

- Built an enterprise portal enabling users to upload YARA rules from remote systems for centralized scanning, viewing, editing, and management.
- Designed REST APIs and CRUD workflows for rule management, applying Service Layer architecture to separate business logic from controllers.
- Implemented Laravel Sanctum-based authentication and authorization to secure rule upload and management endpoints.
- Developed frontend interactions with jQuery and AJAX for real-time rule status updates, integrating tightly with backend APIs.
- Served as primary developer for backend and frontend integration, with all changes reviewed by senior engineers before deployment.

Malware Sample Hub — Backend Developer

Technologies: Laravel, PHP, MySQL, REST APIs, Laravel Sanctum, JavaScript, jQuery

- Built an internal portal for secure upload, storage, and management of malware sample files.
- Developed REST APIs and CRUD modules supporting sample viewing, editing, and lifecycle management.
- Implemented authentication and integrated MySQL for structured storage of sample metadata.
- Resolved bugs and improved backend performance for large file upload and handling workflows.

PERSONAL PROJECTS

Pet Management System (Independent Project)

Technologies: CodeIgniter, PostgreSQL, Custom Authentication, MVC Architecture

- Built a self-directed MVC application for managing pet records, using CodeIgniter and PostgreSQL outside of professional work.
- Implemented custom authentication and CRUD workflows to strengthen backend fundamentals beyond the Laravel ecosystem.
